What is Home Health?

Home health is a wide range of healthcare services that a patient can receive in the comfort of their home. These services are usually given following an injury, illness, or surgery. For those who are eligible, home health is a better alternative to being confined in a healthcare facility as these services are often less expensive, more convenient (the patient gets to stay in their home), and just as effective.

Care Giver Services

Some patients may require assistance following an illness or injury thereby needing help for chores around the house. We provide a qualified professional to provide assistance in activities such as:

- + Light housekeeping (e.g. vacuuming or dusting)
- + Meal preparation
- + Grocery shopping
- + Personal care (e.g. getting dressed, brushing teeth, or brushing hair)

Home Health Services Include?

- + Wound care for surgical wounds and pressure ulcers
- + Patient and family education
- + IV and nutrition therapy
- + Injection administrations
- + Health monitoring
- + Skilled Nursing
- + Physical therapy
- + Occupational therapy
- + Speech therapy
